

PRESS RELEASE

## Payment, simply barrier-free

### Market launch of the new car park "Pay EasyAccess" automatic pay station

**Kiel, 2015-03-23: Right on time for the start of spring, DESIGNA is launching yet another member of the ABACUS Blue Edition family for all car park operators. The Pay EasyAccess pay station provides barrier-free payment at any height.**

Unreachable ticket slot, coin slot too high: Wheelchair users are frequently confronted with these obstacles when they want to pay for their car parking ticket. They often have to ask other customers or service employees for help. In the worst case they even avoid the car park completely.

This is where the new, barrier-free Pay EasyAccess by DESIGNA comes in. It provides unlimited, freely accessible payment for all users at a height of between 90 and 130 cm, and can also be easily operated from the side.

Furthermore, the 4 display language options, country-specific coin-handling and the ability to dispense banknotes provide barrier-free operating convenience.

Pay EasyAccess provides solutions that are extremely important, not just with regard to demographic change. The subject of inclusion in our society is becoming increasingly important, and does not stop at the car park. Barrier-free automatic pay stations are gaining in importance worldwide, and are becoming the standard in an increasing number of countries.

We'd be pleased to advise you!
